How to read this page

- Roles with only a handful of jobs (e.g. data_scientist, data_engineer) have unstable averages; check the job counts in the table.
- One hourly-rate salary (under \$20K) is excluded by the page filter.
- USAJOBS salaries are always published; most Adzuna salaries are estimates.

Skills in Demand

Technical roles only. Skills are matched against the job description text.

Skill mentions

161

Skill Mentions

Jobs mentioning at least one skill

68

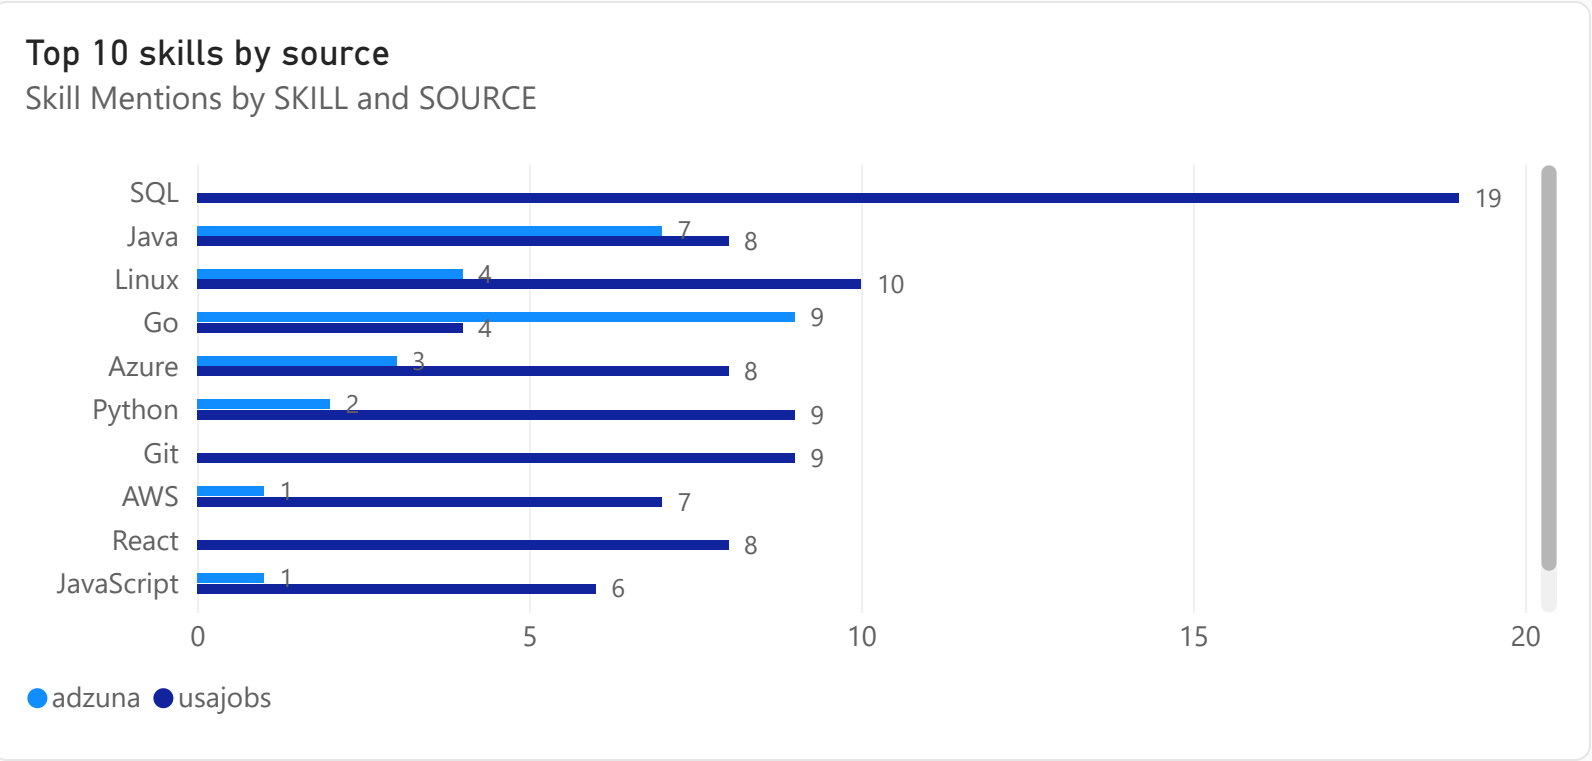

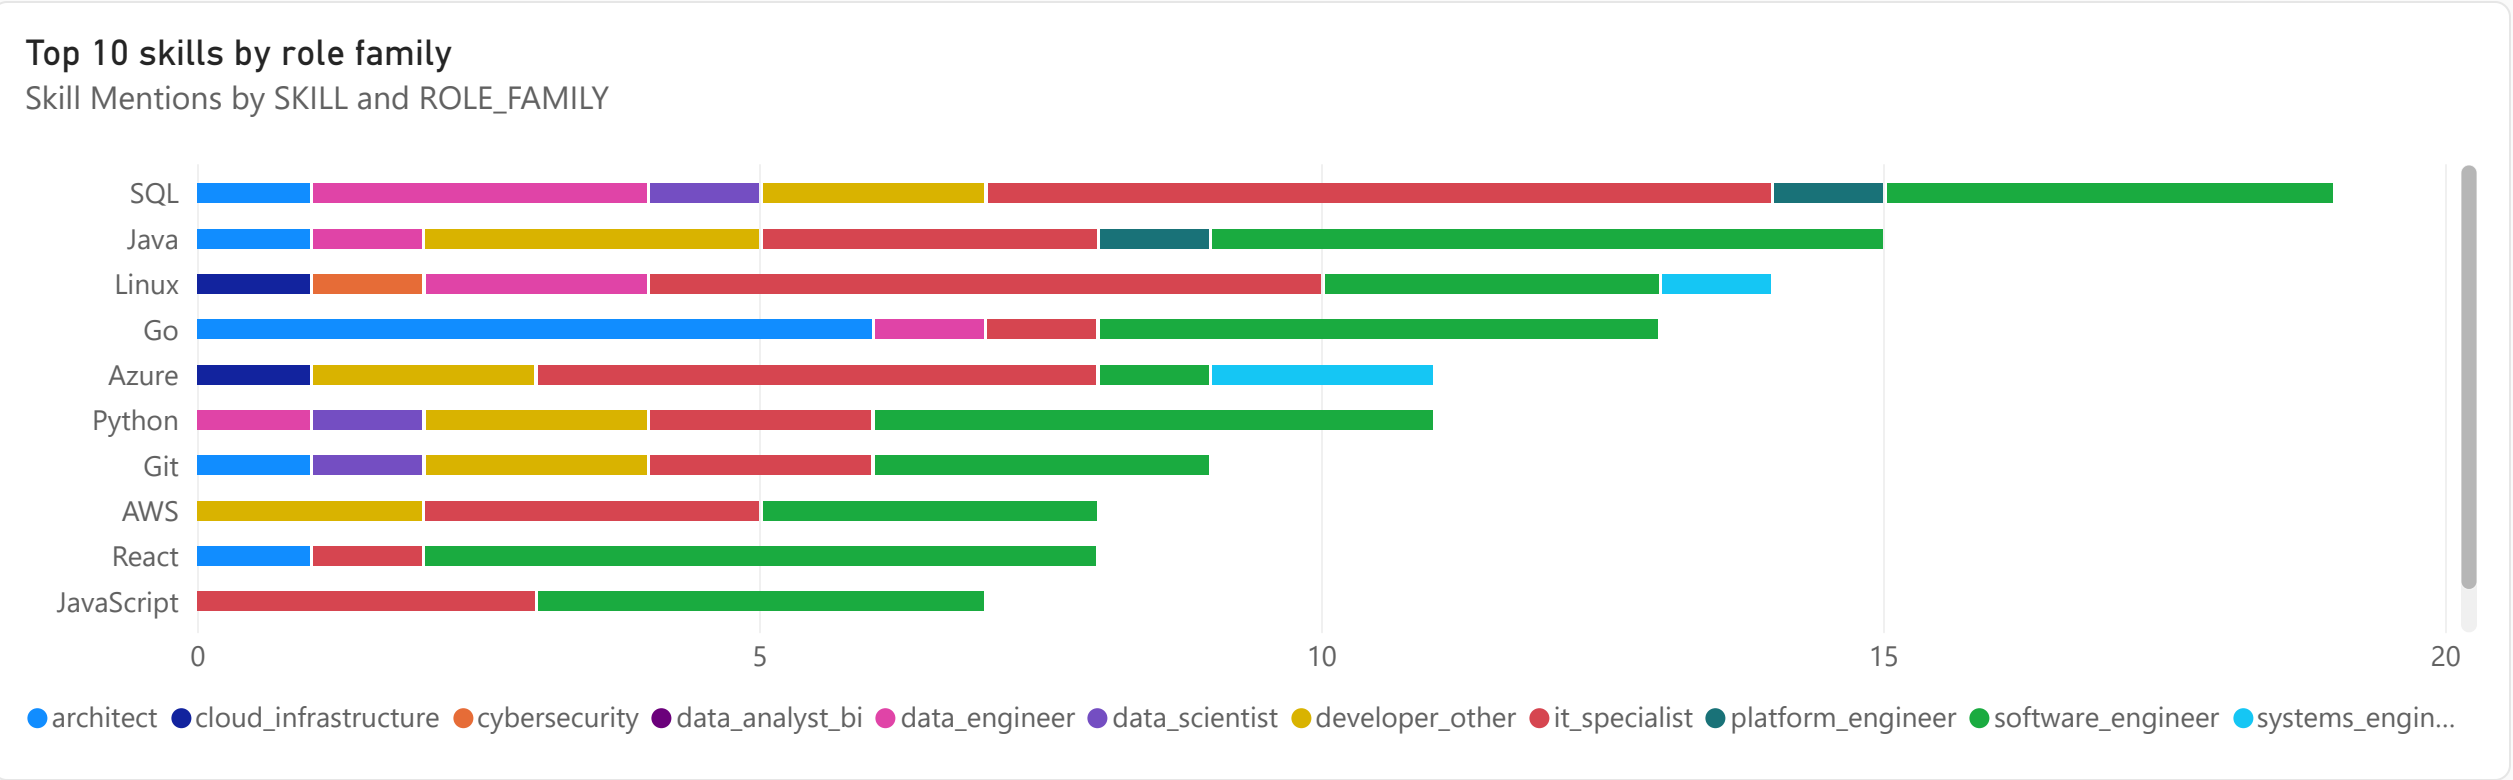

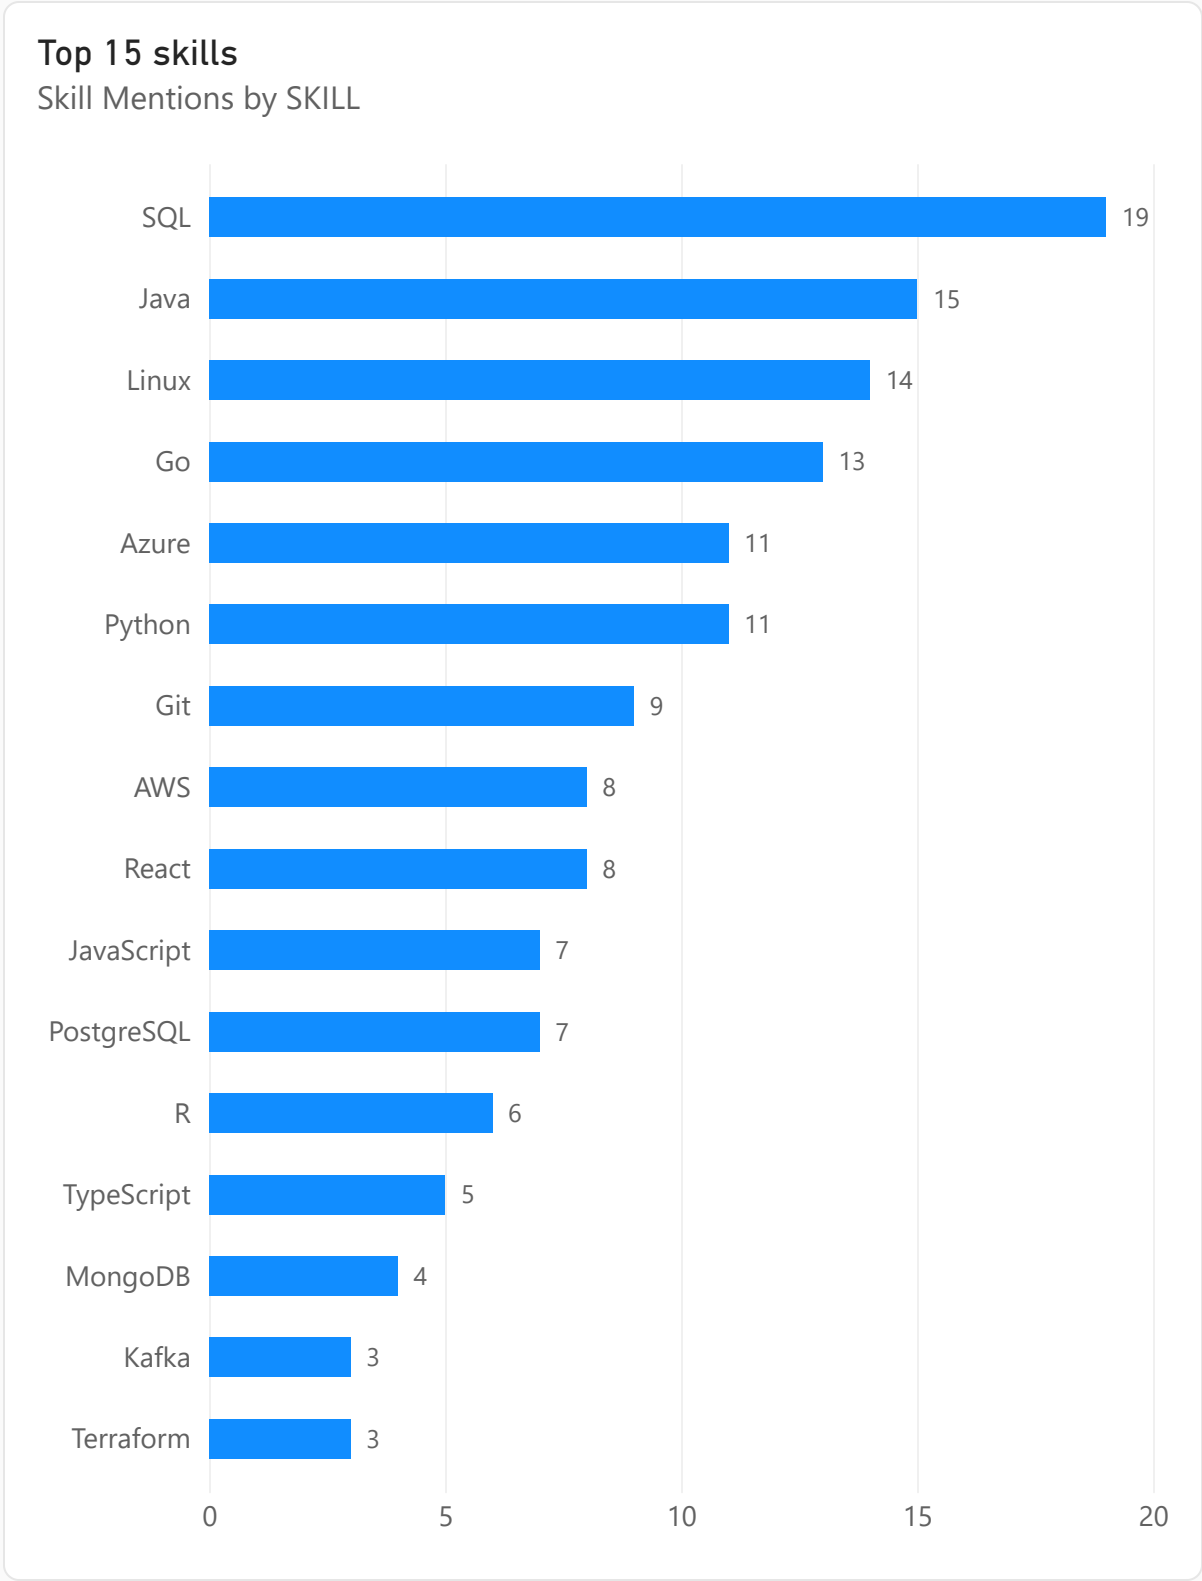

Jobs With Skills

Share of jobs with a skill found

11.7%

% Jobs With Skills

Why skill counts are low
Adzuna cuts job descriptions short, so many skills are never visible to the extractor. USAJOBS descriptions are complete.

JobIntel — Data Quality

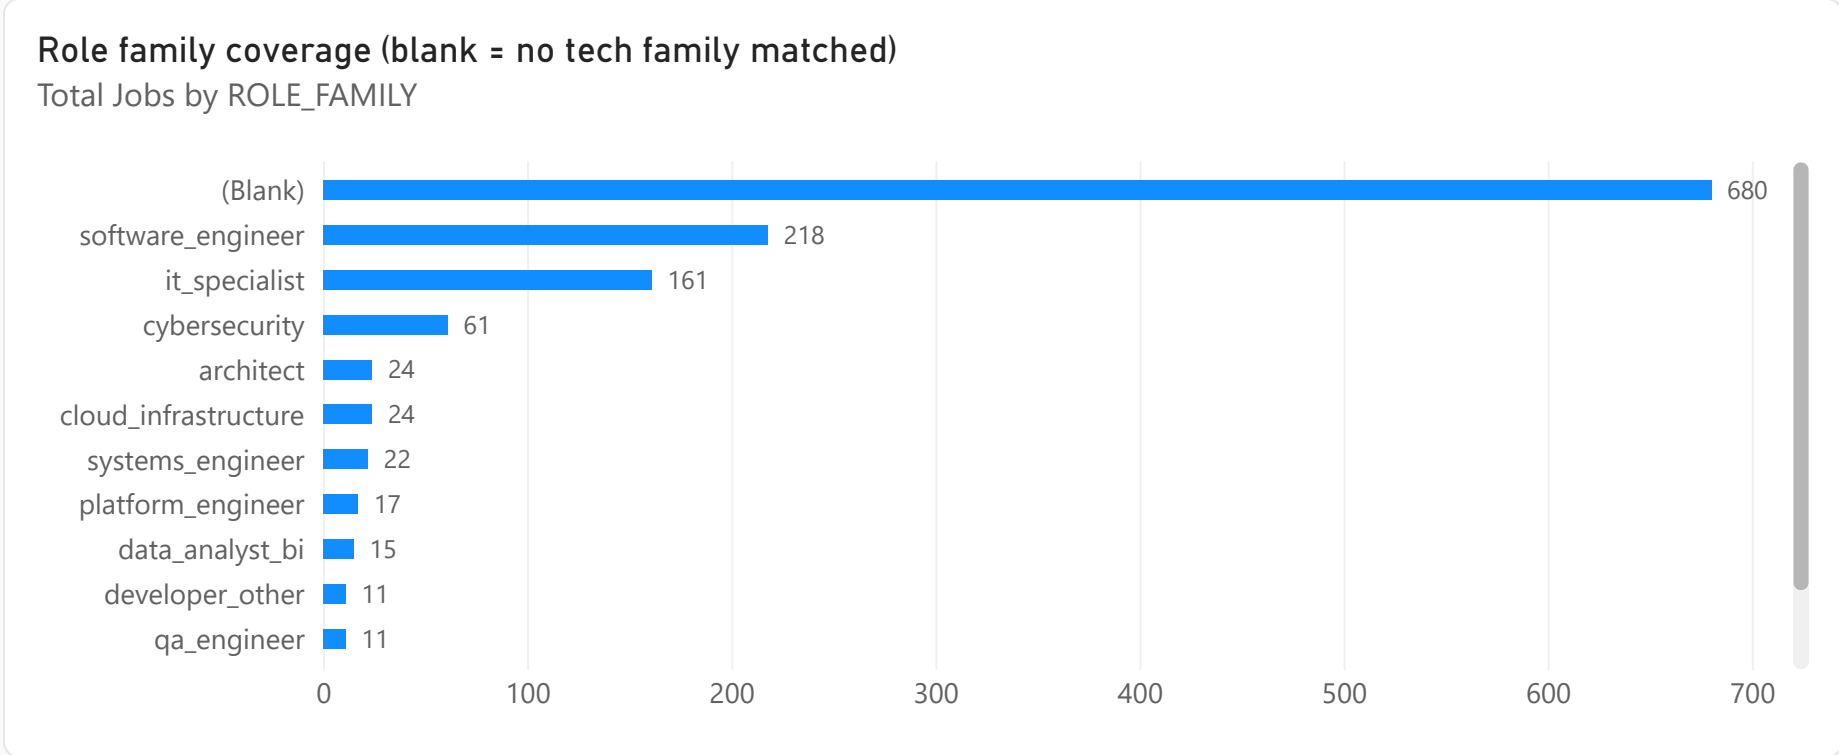

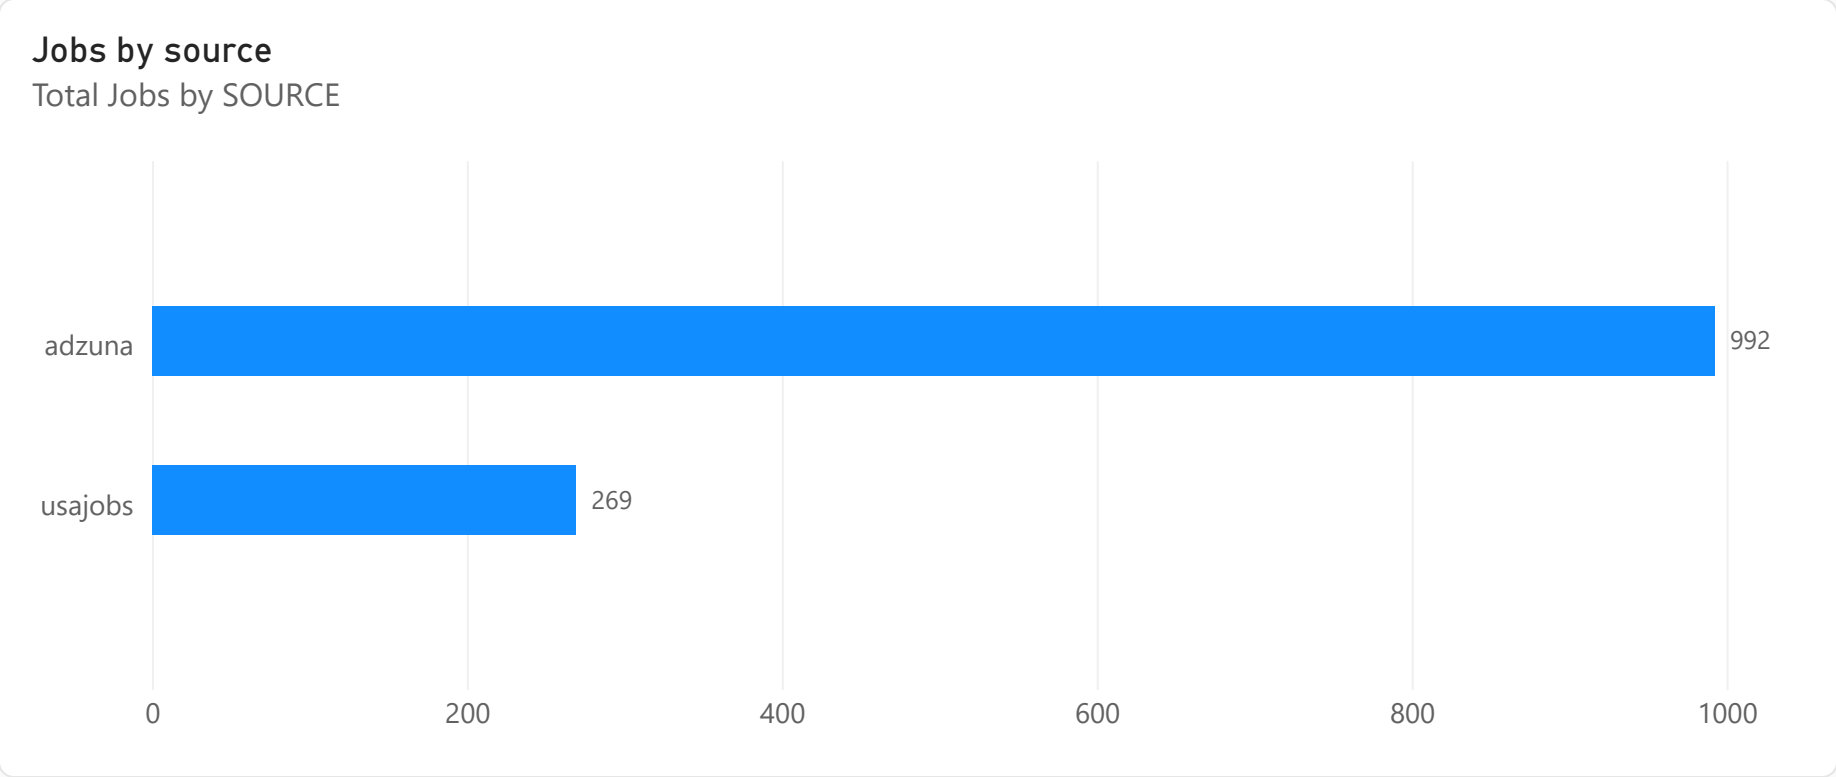

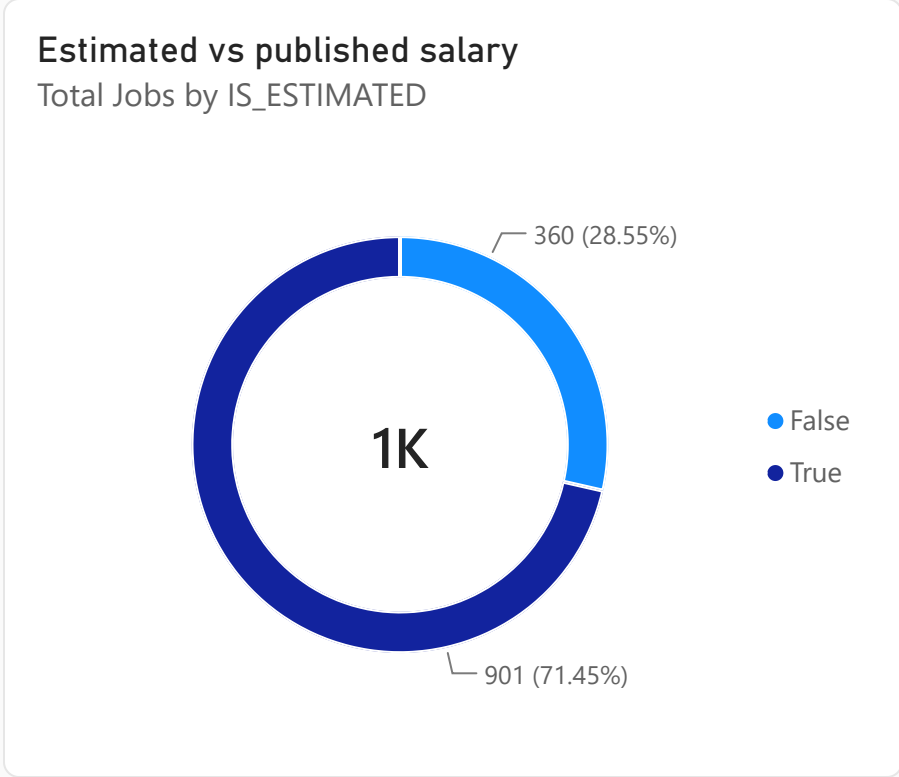

All 1,261 loaded jobs, including the ones without a role family.

Pipeline stage counts

1. Processed: 1,334 (USAJOBS 334 + Adzuna 1,000)
2. Deduplicated: 1,261 (73 removed)
3. Passed quality gate: 1,261 (0 quarantined)
4. Loaded to Snowflake: 1,261

Validated with src/quality/trace_job.py: every stage count matches, no field changed between processed data and Snowflake.

Known limitations

- 680 of 1,261 jobs have no role family (mostly non-technical Adzuna postings); they are excluded from the Tech Job Market page.
- Adzuna truncates job descriptions, so skill counts are low (235 mentions in total).
- Company names are not cleaned: some Adzuna employers include extra text, e.g. "SimVentions, Inc - Glassdoor ⭐ 4.6".
- "(Blank)" in the states chart means jobs with no state in the source data.
- One Adzuna salary (HelloTech, 40–57) is an hourly rate; it is filtered out of salary charts.
- All jobs share one load date (2026-09-08); posting dates are not in the data yet.
